

Green University of Bangladesh
Department of Computer Science and Engineering
Class Test 02, Fall 2023

Course Code: CSE 303

Course Title: Microprocessor and Microcontrollers

Full Marks: 10

Time: 25 minutes

1.	Calculate the memory size, number of address lines and data lines of IC 27256.	2
2.	Let's assume that you are trying to understand memory interfacing by practicing some examples. For this, you are trying to interface two $2^X K \times 8$ EPROM and two $2^X K \times 8$ RAM chip with 8086. Here, X is the last digit of your student ID. If X is 0, 7, 8 or 9, replace it with 3. I. Calculate the starting address and ending address for all the IC's. II. Interface the ICs with a 8086 microprocessor.	2+2
3.	Interface a 8k word RAM with a 8086 microprocessor using absolute decoding where the starting address of the chip is E0000H.	4
